

LLAMA, MD: AI SPECIALIZING IN GYNECOLOGY

Group 3:
Parv Bhargava
Sajan Kumar Kar
Raghav Agarwal
Tanmay Ambegaonkar

IDEA

The idea is to make a LLM proficient in a specialized domain of medical task.

DATASET

- 251k samples
- 3 Features- Description, Patient, Doctor
- Questions asked by the patient, Doctor's response
- Description of the actual question of the patient

TOPIC MODELING

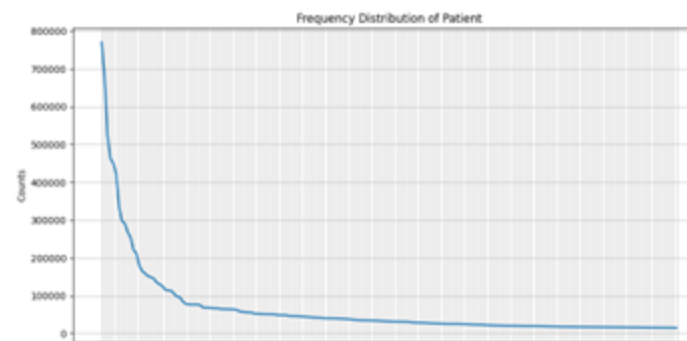

UNDERSTANDING CONTEXT OF
DESCRIPTION, PATIENT & DOCTOR.

1. For better topic modelling, we applied custom threshold on each columns to remove unwanted words in LSA, based on freq.

Thresh for description = 20000

threshold for doctor = 100000

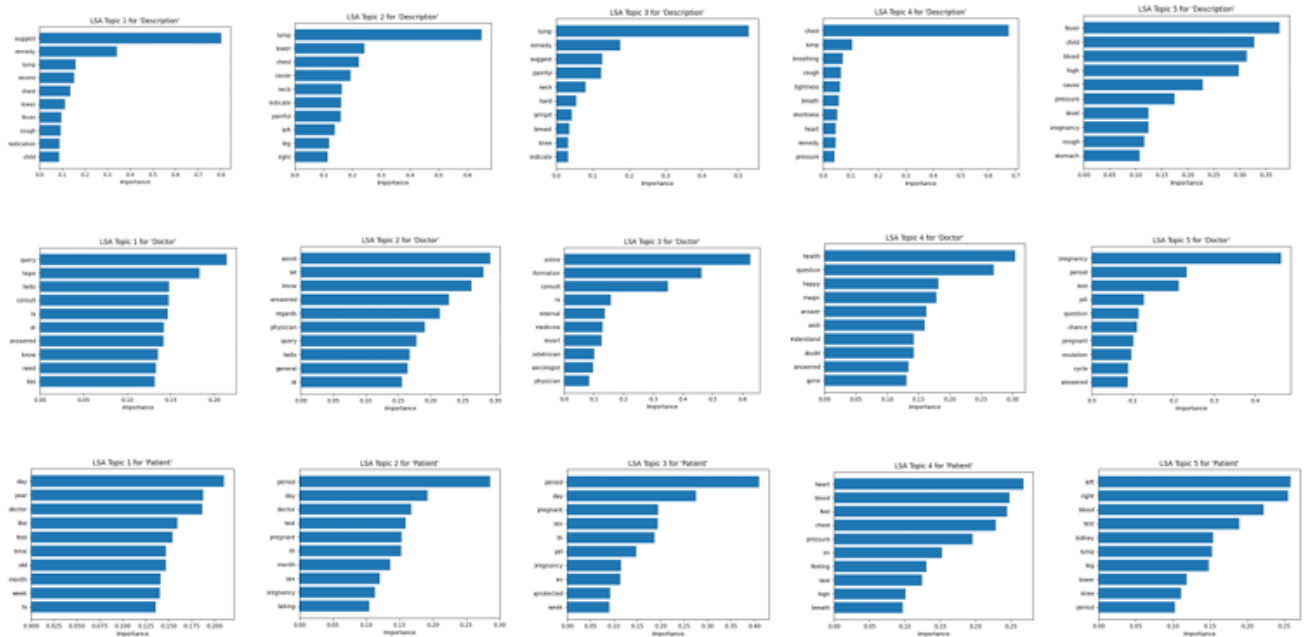

threshold for patient = 100000

TOPIC MODELING

UNDERSTANDING CONTEXT OF DESCRIPTION, PATIENT & DOCTOR.

- For the top 5 topics in the context of each column, we observed that the dataset is predominantly represented by themes related to **Pregnancy**

DATA RETRIEVAL FROM WIKIPEDIA

Stage 1. Retrieves up to 50 documents related to the query "pregnancy."

Stage 2. Collects titles of the retrieved documents for processing.

Stage 3. Saves each Wikipedia page's relevant content (excluding sections like "History" or "References")

DATA RETRIEVAL FROM TEXTBOOKS

Get a list of highly rated books on Gynecology & Pregnancy used by doctors.

Use LangChain's PDF Document Loaders to convert pdf to text files.

Pre-process the text files by removing special characters and other tags.

PROMPT
FORMATTING

FINE-TUNING: LORA

LoRA- Low Ranking Adaptation

It introduces low-rank matrices into the weight update process

FINE-TUNING: PROMPT FORMATTING

Injected prompt formatted instruction to the data as preprocessing.

LLAMA3.2 special tokens: <|begin_of_text|>, <|end_of_text|>, <|eot_id|>, etc
